12.1 64 Bit Free \_TOP\_ Download 34. \_TOP\_ Download Thanks for your help! A: This is due to the mesh on the surface. A  
better explanation of what is happening can be found at this reddit link. However, the fix is: Go into the object file Select the  
Surface and click on the Manage Surfaces panel Delete the mesh Save the file This should give you a file with no surface  
whatsoever. My recommendation would be to learn the Nastran instructions on how to make a model first. You can always  
come back to this problem later. However, since you have already learned the basics I suggest going with the program you are  
comfortable with. Hope this helps. /\* \* Copyright (c) 2000-2006 Silicon Graphics, Inc. \* All Rights Reserved. \* \* This program
